Model JS-TQ001, size 450mm*25mm*0.635mm

This product is made of medical polymer thermoplastic elastomer, milky white or color, long flat type,

The new design point is used to pack the box, which is flexible and can be extracted continuously.

This product is suitable for medical institutions in routine treatment and treatment of infusion, blood transfusion, blood transfusion, hemostatic one-time use;

Emergency hemostasis in case of body bleeding or bleeding from field snake and insect bite.

Contraindications, matters needing attention, warnings and reminders:

1. This product is disposable and shall be destroyed after use;
2. If the package is damaged, it is strictly prohibited to use.
3. After use, please cover the suction cover to avoid dust and bacterial contamination;
4. The production date is shown on the side of the packaging box or the certificate of qualification;

Warnings and reminder:

A tourniquet can block the flow of blood, and tying it too long can seriously damage tissue, even lead to limb necrosis.

A tourniquet should only be used to bind the limbs, not the head, neck, or trunk.

Don't cover it with anything else, and don't cover the tourniquet tied to the limb.

If you have to leave the patient alone in the camp, over his head, with a pen or lipstick, write down the timing of the bundle and the location of the kit.

Check blood circulation:

After the tourniquet is bandaged, the toe or finger should be checked frequently to see if there is a dark purple spot at the end of the tourniquet, and whether the body temperature at the end of the tourniquet has dropped.

If there is such a phenomenon, should loosen the cloth band, otherwise for a long time, will cause tissue necrosis.

For the same reason, a tourniquet should not be used for long periods of time to tie a limb, unless it is necessary to do so during an arterial ligation. In general, direct pressure should be tried first, followed by pressure points until direct pressure is maintained on the wound.

If the wound is at the end of the limb, elevate it.

Storage conditions:

the packed tourniquet should be stored in the relative humidity of no more than 80%, without corrosive gas and well ventilated

the packaged tourniquet shall be valid for 3 years from the date of production under the conditions of storage, transportation and storage
